

Comfort Control

That Goes Where You Go

Today, most thermostats aren't conveniently located where most of us spend our time - especially where we sleep or watch TV. It's also pretty typical for most homes to have one room or area that's too hot or too cold, but we rarely do anything about it.

Isn't it time you took control of your comfort?

You can. Now, the elegantly simple handheld life enters the world of home comfort with the Portable Comfort Control - a part of the Prestige Comfort System. The Portable Comfort Control is the most convenient approach to managing comfort and energy usage within your home.

Because it senses temperature wherever it goes, it gives you the freedom to make adjustments from anywhere in your home to be comfortable in the rooms where you live.

Get Wireless

The Portable Comfort Control doesn't replace your existing thermostat, but works with a Honeywell Wireless FocusPRO® Thermostat. Because it's wireless, your contractor can put the thermostat wherever it's most convenient for you.

Get Comfortable

The average homeowner adjusts their thermostat more than five times per day trying to get the temperature "just right" in the room that they're in. With the Portable Comfort Control, you don't have to sacrifice comfort. Bring it with you wherever you're uncomfortable to either adjust the thermostat, or sense and change the temperature in that room.

The Portable Comfort Control is perfect for the home office, the nursery, the bonus room, and for people who aren't able to easily get up to adjust the thermostat. You'll be comfortable knowing that your rooms are the exact temperature you want them to be.

Get Control

Energy Savings in the Palm of Your Hand

The Portable Comfort Control takes energy savings to a whole new level of convenience. Because it displays both outdoor temperature and humidity, you'll be better informed for making energy-related decisions. For example, if you see that it's cooler outside than it is inside - or vice versa - you can open your windows to save energy rather than run your heating and cooling system.

The Portable Comfort Control also maintains your schedule from your programmable thermostat. Easily adjust the temperature setting before bedtime to set-back for energy savings after you fall asleep - or turn the system off for easy overnight energy savings.

View the outdoor temperature and humidity

Toggle between zones to set the temperature in any zone from anywhere in the home

One Control for Every Zone

While most homes have multiple light switches to control the electricity in different areas, most homes only have one thermostat. Be sure to ask your contractor about multiple temperature zones or thermostats for your home. With zoning, the Portable Comfort Control can be used to change the set temperature in any zone in the house from anywhere in the house. For example, watch TV downstairs at night, but warm the upstairs bedroom before going to bed.

Or, make sure that all zones are turned down for energy savings before you turn the lights out each night. You can even name each of your zones on the Portable Comfort Control by having your contractor customize it with more than 60 different naming options - upstairs, master bedroom, office - even wine cellar and home theater!

Additional features of the Portable Comfort Control include:

- **Ultra-Simple:** 98% of homeowners quickly understood how to use it when asked
- **Zero Interference:** With other wireless devices in the home such as baby monitors or cordless phones
- **Built-In Pager:** Push a button on the thermostat to easily locate the control with an audible noise
- **Goes The Distance:** Works in every home — tested up to 10,000 sq. feet
- **Displays Outdoor Temperature And Humidity:** Just like having a weatherstation
- **1-Year Battery Life And 2-Month Battery Warning:** Gives you plenty of notice
- **Built-In Back-Up:** In the event that power is lost from the Portable Comfort Control, the thermostat will resume control of your system
